# *“A really simple security bypass”*

This is really simple...

The flag is in a **draft post** accessible by the admin.

# Instructions

---

- Download the VM:
  - The exact URL will be shared.
- Run it (via *VirtualBox*).
- Connect to the website:
  - <http://localhost:1337>
- Happy hacking!
  - Flag is in the format: `meethack{l33t_string}`
  - The vulnerability is NOT on WordPress core.
  - Pay attention to the spoilers, i.e. public exploits!
