N-day Analysis:
"Black Project" challenge

Meethack

Instructions

- Download the VM:
    - The exact URL will be shared.
- Run it (via *VirtualBox*).
- Connect to the website (in HTTPS):
    - https://localhost:1337
    - Credentials: attacker / attacker
- Happy hacking!
    - Flag is in the format: `meethack{l33t_str1ng}`

Caveats

- The challenge was intended to run on the latest version of WordPress (6.6.2).

  – A new stable version (6.7) could have been released in the meanwhile (target date: 2024-11-12).

  – This means the vulnerability is <u>not</u> on WordPress core… 🐇🕳️

- Pay attention to the spoilers!

  – My exploit is already publicly available on GitHub and it has already been scraped by vulnerabilities collector websites… 😅

  – A PoC by WPScan is scheduled to be released on 2024-11-11.
